1 Database theory, technology and applications (DTTA): Enhancement of workflow

flexibility by composing activities at run-time
ShuiGuang Deng, Zhen Yu, ZhaoHui Wu, LiCan Huang

window

March 2004 Proceedings of the 2004 ACM symposium on Applied computing

Publisher: ACM Press

Full text available: pdf(390.91 KB) Additional Information: full citation, abstract, references, index terms

Flexibility has recently grown to be one of the major research topics in the area of workflow management. A workflow system that supports flexible processes will benefit organizations more. In this paper, we present a workflow model offering flexibility by enabling activities to be composed automatically or manually at run-time. Our model uses selection constraints and composition constraints to guide end users to build valid workflow specifications. As an application of this model, we outline t ...

5 Session 3C: evolution, adaptation and learning I: Mutual online concept learning for

multiple agents Jun Wang, Les Gasser

July 2002 Proceedings of the first international joint conference on Autonomous agents and multiagent systems: part 1

Publisher: ACM Press

Full text available: pdf(229.94 KB)

Additional Information: full citation, abstract, references, citings, index

To create multi-agent systems that are both adaptive and open, agents must collectively learn to generate and adapt their own concepts, ontologies, interpretations, and even languages actively in an online fashion. A central issue is the potential lack of any preexisting concept to be learned; instead, agents may need to collectively design a concept that is evolving as they exchange information. This paper presents a framework for mutual online concept learning (MOCL) in a shared world. MOCL e ...

6 Session 1: Group formation in computer-supported collaborative learning

Martin Wessner, Hans-Rüdiger Pfister

September 2001 Proceedings of the 2001 International ACM SIGGROUP Conference on Supporting Group Work

Publisher: ACM Press

Full text available: pdf(245.34 KB)

Additional Information: full citation, abstract, references, citings, index

Group formation in CSCL environments is either done manually with little support from the system, or the system needs an elaborated model of the learning domain in order to select potential peer learners and to form learning groups in a pedagogically sound way. Our research objectives include the integration of collaborative learning into the learning environment so that knowledge about the collaboration context can be used to support collaboration, including group formation without the need for ...

7 Short papers: Activity-oriented context-aware adaptation assisting mobile geo-spatial

Guoray Cai, Yinkun Xue

January 2006 Proceedings of the 11th international conference on Intelligent user interfaces IUI '06

Publisher: ACM Press

Full text available: pdf(111.82 KB) Additional Information: full citation, abstract, references, index terms

Human geospatial activities often involves the use of geographic information in mobile environment where the context of technology use is dynamic, complex, and unstable, creating unique challenges in designing effective mobile mapping applications. Enhancing the context awareness of the computing device can improve the usability of mobile map applications, but the potentially large number of contexts (physical context, computing context, human factors, and time) are not easily managed without a ...

+acitivity +framing +time +series

SEARCH

Nothing Found

Your search for +acitivity +framing +time +series did not return any results.

You may want to try an Advanced Search for additional options.

Please review the Quick Tips below or for more information see the Search Tips.

Quick Tips

• Enter your search terms in <u>lower case</u> with a space between the terms.

sales offices

You can also enter a full question or concept in plain language.

Where are the sales offices?

 Capitalize <u>proper nouns</u> to search for specific people, places, or products.

John Colter, Netscape Navigator

• Enclose a phrase in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

 Narrow your searches by using a + if a search term <u>must appear</u> on a page.

museum +art

• Exclude pages by using a - if a search term <u>must not appear</u> on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

museum +"natural history" dinosaur -Chicago
